Metal Facades

GRUPO NUETALIA

IMAR Singular Metal Solutions

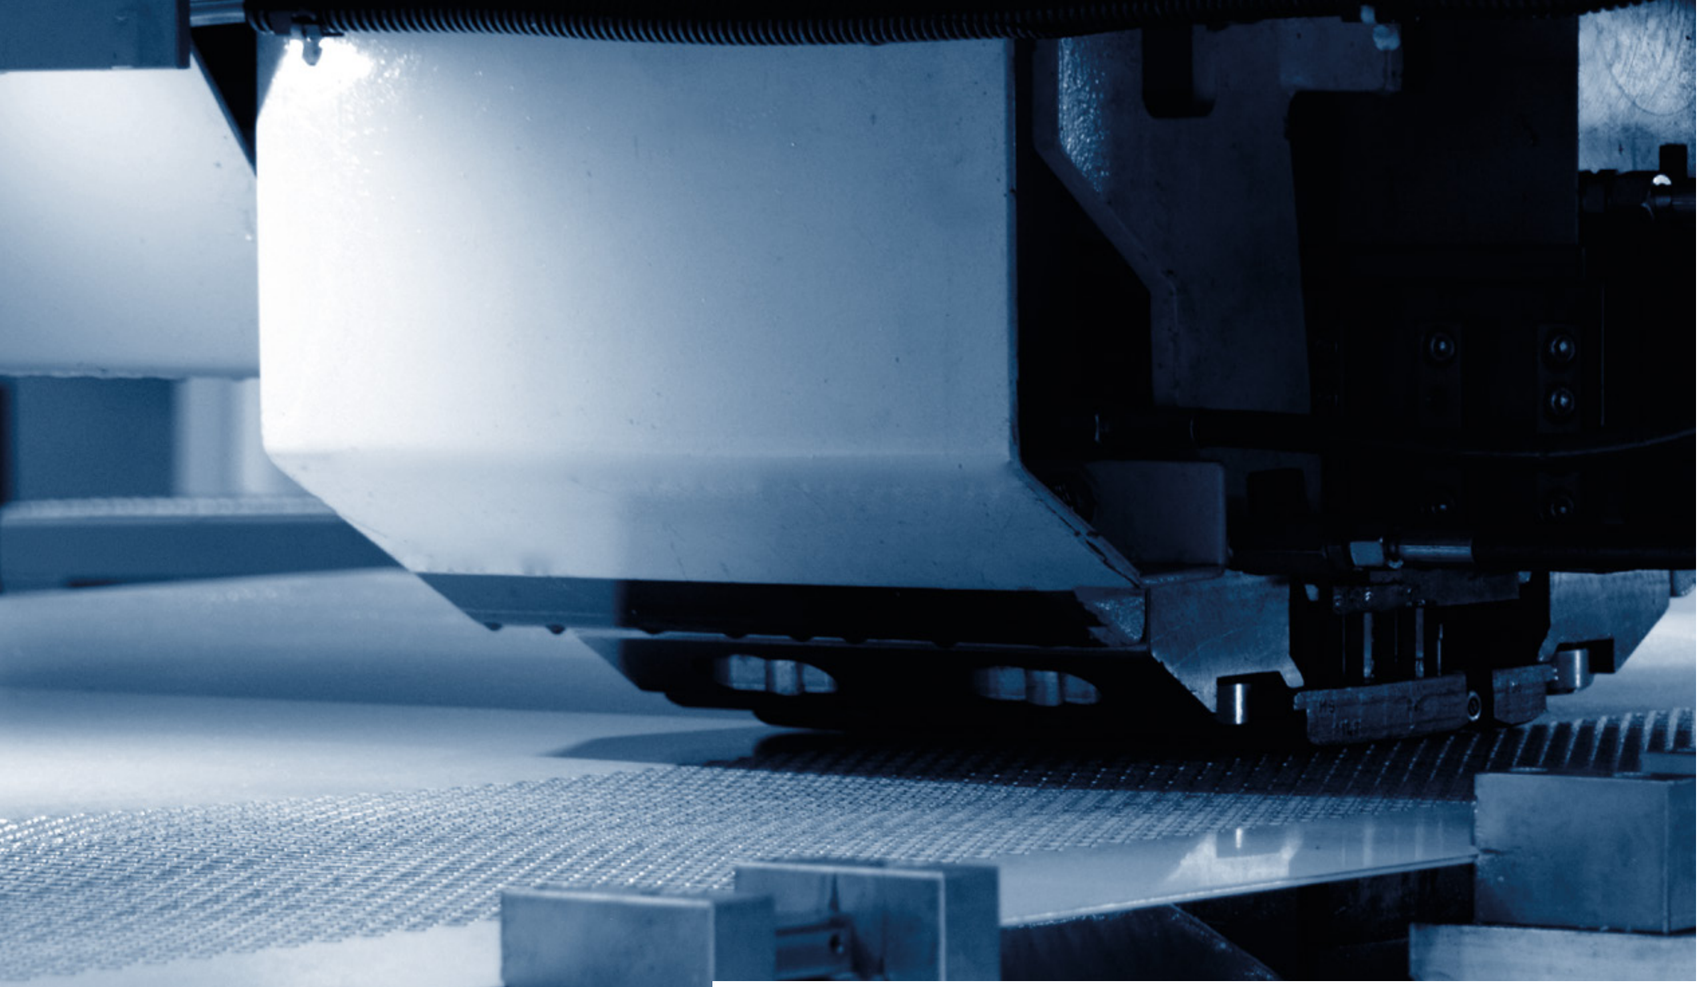

IMAR Singular Metal Solutions

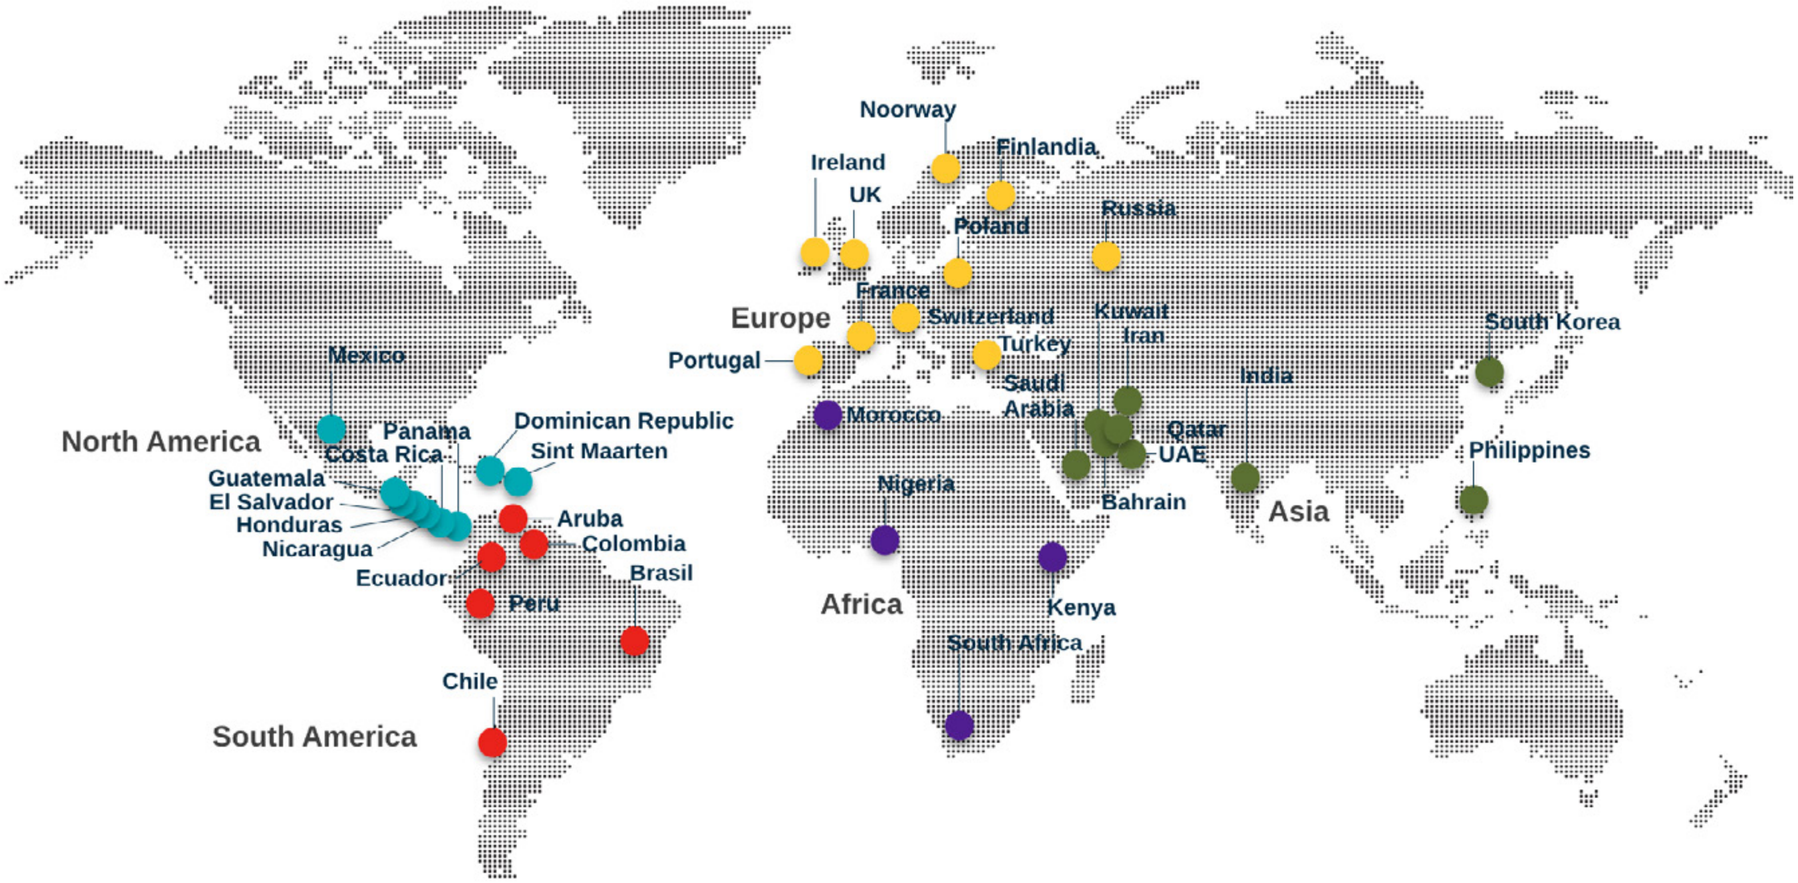

Metal solutions for industry and singular architecture

ISO 9001
BUREAU VERITAS Certification

since 1931

Imar was founded in 1931 by Erasmo Imbert in Burceña (Vizcaya). He started manufacturing perforated metal for the Basque steel industry. Over the years the company has developed new products and markets to become a leading company in Spain with two factories and more than one hundred employees.

During the last years we conducted **a great international expansion plan** and our efforts have already been rewarded with new incoming orders.

WORLDWIDE

IMAR

WHAT we do

At Imar **we are specialized at** engineering, development and manufacture of all types of metallic surfaces. Unlimited solutions with the most advanced metal transformation processes that have allowed us to create facades of all shapes, volumes and imaginable textures for buildings around the world.

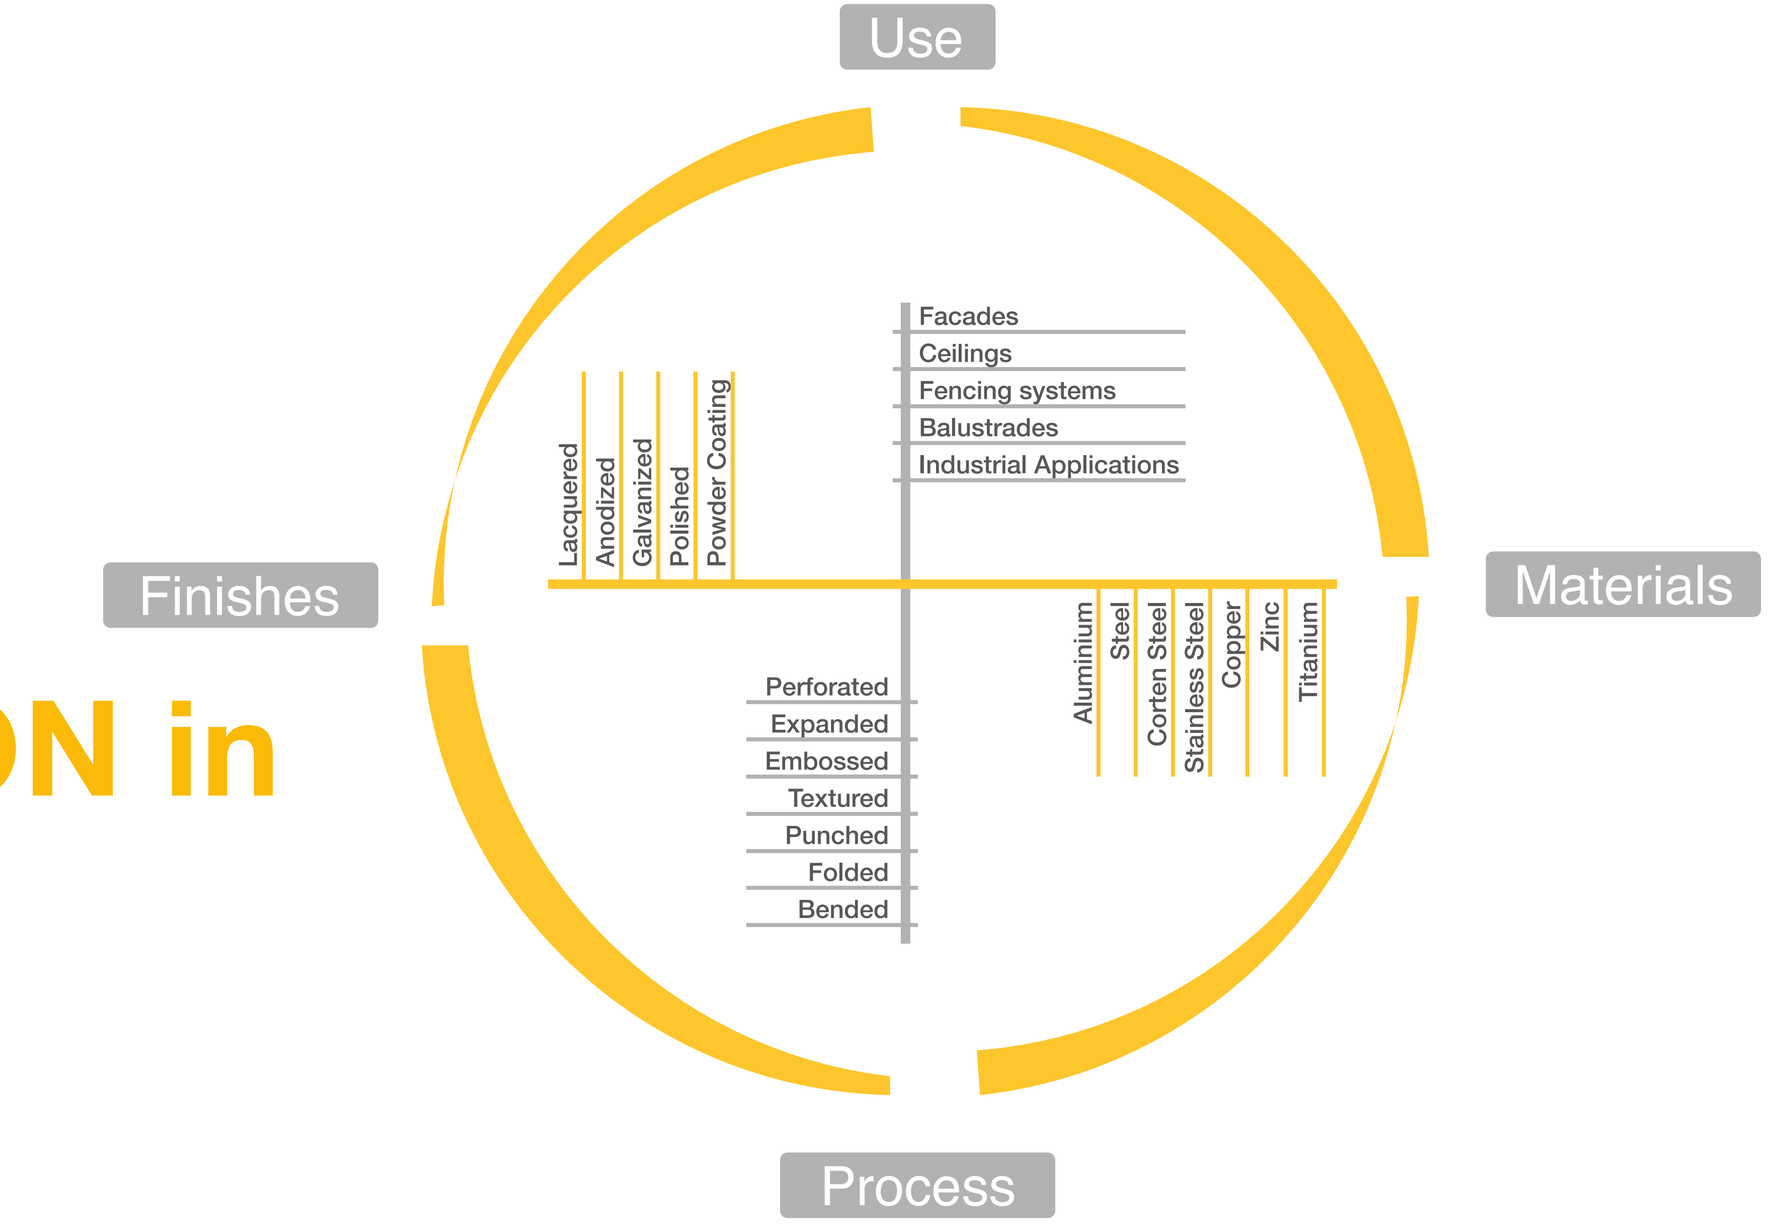

ENGINEERING
for architecture

Imar specializes in engineering and production of innovative aluminium, steel, brass, zinc, copper or titanium surfaces, providing comprehensive solutions for singular façades all over the world.

during construction

PERSONALIZED
solutions

In Imar we are able to create shapes or represent images in the metal. This allows you to integrate your **identity** into facades or any surface, and make every application unique and personalized.

improved
ENERGY EFFICIENCY

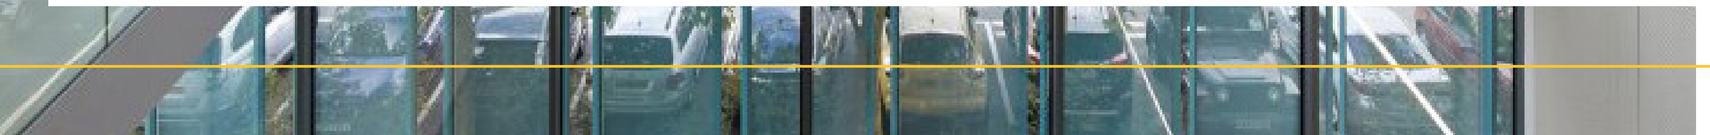

Double skin filter and / or minimize the impact of solar radiation on the inner skin of the building. The advantage of perforated & expanded metal mesh is that they perform this function without removing the natural lighting.
This technique has a positive effect in the internal temperature, avoiding over-heating and reducing energy consumption.

IMAR

IMAR

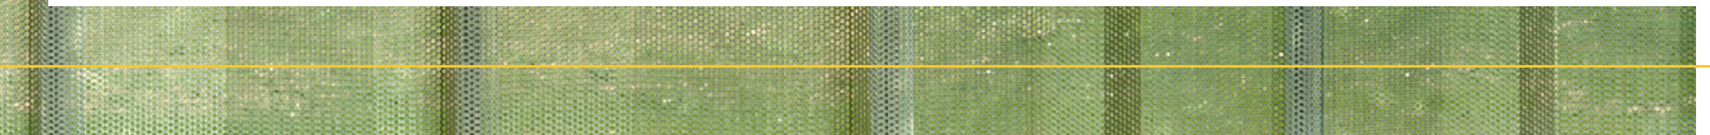

GREEN

IMAR have defined a range of solutions based on different softwares that compares perforated and expanded metal double skin solutions with a simple glass, and with the performance of thermal glass.

SPECIFIC SOLUTIONS

The solar factor of perforated & expanded metals depends on the:

- Geographic location
- Orientation and inclination of the surface
- Day and hour

It can be used for different applications, such as:

- Research Centres
- Shopping Centres
- Office Buildings
- Residential building
